Thanks Shauna – I suppose it makes sense to include this language in all oil terminal permits for consistency -

Hi George,

Damien forwarded this to me. The section you cite and the request for comment is nearly word for word what I split between the permit and fact sheet for the Chelsea terminal permits for this BMP. If you need to incorporate the major storm event provisions, you can go to the Gulf permit and fact sheet to lift that language. It will also have Damien's current comments on it.

Hi Shauna –

I'm sure you have this link but just in-case you don't, see below.

Subject: Proposed 2020 MSGP

Damien,

See link to proposed MSGP, including the full webinar from today. There is also a summary of proposed changes and the one I attached below deals with extreme weather events.

Consideration of major storm control measure enhancements

EPA proposes that operators would be required to consider implementing enhanced measures for facilities located in areas that could be impacted by stormwater discharges from major storm events that cause extreme flooding conditions. See Part 2.1.1.8 of the proposed permit and fact sheet, and request for comment 8.
